Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

1. Claims 1-3 and 5 are objected to because of the following informalities: The “a resistance value”, “an ADC value”, and “an external accessory” in claims 1-3 and 5 seem referring objects already cited, the article “a” or “an” should not be used, otherwise, different names should be used for avoiding confusion. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1 and 3-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Henrie et al. (US 2002/0099878 A1).

Henrie teaches a portable terminal (100, fig. 1) connectable to various external accessories, comprising: an earjack (180) in which the external accessories can be

coupled, an analog-to-digital conversion (ADC) section (62) for converting a resistance value of an external accessory coupled to the earjack into an ADC value (see section [0052], page 2), a memory (103) for storing ADC values of the external accessories, and a controller (101) for converting the resistance value of the external accessory coupled to the earjack into the ADC value by controlling the ADC section, determining a type of the external accessory coupled to the earjack by comparing the converted ADC value with the ADC values stored in the memory, and performing a function of the plugged-in external accessory via a corresponding pin of the earjack (see also section [0052], page 2), and a power supply (215) for providing power of constant voltage to external accessories as needed.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Henrie et al. in view of Hellberg (US 6,742,061 B1).

Henrie discloses the claimed invention except indicating the earjack being connectable to different types of accessories.

Hellberg teaches a portable terminal (30, fig. 2) connectable to various external accessories, comprising an earjack (40) including: a ground pin, a microphone pin, a speaker pin, an interrupt pin, an ADC pin (10A or a pin 61 of Henrie), a received data pin, a transmit data pin, a serial clock pin, a serial data pin, and a trigger pin (all pins being shown in figs. 1 and 2, not labeled; pins not specifically shown may be included as 10B).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the portable terminal of Henrie with the earjack taught by Hellberg for indicating pins of different connections.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Odagiri et al. (WO 01/65827 A2).
